

POLYURETHANE WINDSHIELD ADHESIVE

1 – DESCRIPTION

Polyurethane Windshield Adhesive is a component, moisture curing polyurethane based adhesive for direct glazing in Automotive Glass Replacement.

2 – PROPERTIES

- One component formulation
- Good non-sag properties
- Short cut-off string
- Cold application
- Fast curing – Rapid strength development
- High mechanical performance
- High Modulus
- High initial bond strength
- Can be overpainted

3 - APPLICATIONS

It is especially useful in bonding windshield glass into automotive frames

4 - INSTRUCTIONS

- Remove the damaged glass. Before application ensure that surfaces are clean, dry and free from dust and grease.
- Shake the Polyurethane Windshield Adhesive Primer for at least 30 seconds (after hearing the ball move) before application.
- Apply Windshield Adhesive Primer to the outer edge of the glass where the urethane bond will be made and allow to dry.
- Ensure that primer is tack-free dry before proceeding.
- Cut tip of the nozzle to desired shape and size to provide a bead height sufficient to give good contact with the windshield around the entire perimeter. A triangular shaped notch will provide the optimal bead shape and height.
- It is recommended to apply the adhesive with a pneumatic sealant gun.
- Apply Polyurethane Windshield Adhesive directly to the glass
- Position the glass by aligning the masking tape on glass and car body. Press glass in place to assure complete contact with the Polyurethane Windshield Adhesive

5- STORAGE AND SHELF LIFE
